**Scope:**

Ceiling fans with Radio Frequency (RF) remote controls in multi-unit and hospitality applications –

Potential issues:

If more than sixteen (16) fans are installed at one location – our sixteen (16) code dip-switch receivers (see image below) will likely have interference issues. Meaning, the transmitters will control more than one ceiling fan at a time. The potential for severe issues is great in apartments, hotels, condominiums, and the like.

If your installation has sixteen (16) fans or less, please follow the fans owner's manual "How to Wire Your Ceiling Fan" section – to set the codes properly.

**Resolution:**

Before quoting or selling more than sixteen (16) units that use an RF remote, please strongly consider this issue and consult with Quotes@Fanimation.com or TechSupport@Fanimation.com. Alternatives may exist for various Fanimation ceiling fans.
